Date	15 March 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
credit_card_approval_project/
|
├── app.py
├── model.pkl
├── scaler.pkl
├── requirements.txt
├── README.md
|
├── dataset/
|      ├── application_record.csv
|      └── credit_record.csv
|
├── templates/
|      └── index.html
|
├── static/
|      ├── css/
|      ├── images/
|      └── js/
|
├── notebooks/
|      └── Credit_Card_Approval.ipynb
|
└── saved_models/
       └── xgboost_model.pkl
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	GitHub
Repository Link	https://github.com/sreevani-0713/credit-card-approval-prediction

Demo Video Link	

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites

- Python 3.10 or above
- Visual Studio Code
- Git
- Flask
- Pandas
- NumPy
- Scikit-Learn
- XGBoost
- Matplotlib
- Seaborn
- Joblib

Step 1

Clone the repository.

```bash
git clone https://github.com/gunashekarr1/credit_card_approval_project.git
```

Step 2

Navigate to the project folder.

```bash
cd credit_card_approval_project
```

Step 3

Install all required dependencies.

```bash
pip install -r requirements.txt
```

Step 4

Run the Flask application.

```bash
python app.py
```

Step 5

Open your browser and access the application.

```
http://127.0.0.1:5000
```

Step 6

Enter applicant details and click **Predict** to view the credit card approval result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on the quality of the training dataset.	Can be improved by using larger and updated datasets.
2	The application currently predicts only binary outcomes (Approved/Rejected).	Future versions can include approval probability and risk scores.
3	The application is designed for demonstration purposes and is not connected to live banking systems.	Future integration with banking APIs and real-time databases is planned.
