

Demonstration of Proposed Features

Date	03 July 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Demonstration of Proposed Features:

S.No	Feature Name	Description	Status (Implemented / Partial / Pending)	Demonstrated (Yes / No)	Remarks
1	Credit card Application Form	Allows users to enter applicant details such as income, employment status, education, family status, and credit history for approval prediction.	Implemented	Yes	Working successfully
2	Data Preprocessing	Performs data cleaning, handles missing values, encodes categorical features, and scales numerical data before prediction.	Implemented	Yes	Successfully integrated
3	Machine Learning Prediction	Predicts credit card approval using the trained best-performing machine learning model (Random Forest/XGBoost).	Implemented	Yes	High prediction accuracy
4	Instant Result Display	Displays whether the credit card application is Approved or Rejected instantly through the web interface.	Implemented	Yes	Real-time prediction
5	Flask Web Application	Integrates the machine learning model with a user-friendly Flask web application for online predictions.	Implemented	Yes	Successfully deployed locally
6	Model Storage & Cloud Deployment	Loads the saved trained model (.pkl) for prediction and supports IBM Watson Machine Learning cloud deployment for scalable access.	Implemented	Yes	Stable model loading and cloud-ready

Feature Implementation Summary:

Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%
