

Data Flow Diagram

Date	15 March 2026
Team ID	
Project Name	Credit Card Approval Prediction Using Machine Learning
Maximum Marks	2 Marks

Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents entities interacting with the system, such as the Applicant , Bank Credit Analyst , or Compliance Officer , who submit or receive credit card approval results.
Rectangle with numbered header	Process	Represents operations performed by the system, such as Validate Applicant Details , Preprocess Data , Predict Credit Card Approval , and Notify Applicant .
Rectangle (solid fill, no number)	Data Store	Stores project data such as the Applicant Database , Trained Machine Learning Model , and Prediction Records for future reference.
Labeled arrow	Data Flow	Shows the movement of information between entities, processes, and data stores, such as Application Details , Processed Features , Prediction Result , and Approval/Rejection Status .

Example

The diagram below illustrates the data flow of the **Credit Card Approval Prediction System**. Applicant information is collected and validated, stored in the applicant database, processed by the machine learning model to predict credit card approval, and the final approval or rejection result is stored and communicated to the applicant or bank credit analyst.
